

Student Details:

NAME: SARTHAK JINDAL

REG. NO: 25BCE10189

SLOT: C21

FACULTY NAME: KANNAN

Task 1: Digital Literacy Awareness **Infographic**

Tool Used: Canva

Design Overview: For the first task of my Student Digital Ambassador assignment, I designed a one-page visual resource titled "Digital Literacy Guide". The infographic is structured into four distinct phases to help my peers navigate the digital landscape effectively.

- **Phase 1: Awareness** focuses on defining digital literacy as the ability to find and evaluate information beyond just using a smartphone.
- **Phase 2: Security** highlights essential safety practices, such as using strong passwords and enabling Two-Factor Authentication (2FA).
- **Phase 3: Presence** emphasizes the importance of a professional digital footprint on platforms like GitHub or LinkedIn.

- **Phase 4: Critical Thinking** addresses the responsibility of fact-checking to stop the spread of misinformation.

Reflections: I found the process of condensing complex topics into short, actionable bullet points quite **interesting**, as it forced me to think about what information is most vital for a student's safety. One thing I found **difficult** was selecting a layout that looked professional yet engaging for my batchmates. Ultimately, using Canva allowed me to create a high-quality resource that serves as a foundational guide for anyone looking to improve their digital literacy.

Task 2: Student Digital Portfolio

Report

Platforms Chosen: GitHub, LinkedIn, and Kaggle.

Description and Usage: For my foundational digital portfolio, I established professional accounts on **GitHub**, **LinkedIn**, and **Kaggle**. I use **GitHub** as a central repository to host my coding projects, specifically focusing on my transition from a Python enthusiast to a developer capable of bridging the gap between software and computer architecture. **LinkedIn** serves as my primary professional network, where I have documented my academic credentials at VIT Bhopal University and highlighted my achievements, such as securing a 94.2% in my XII Senior

School Certificate Examination. Lastly, I chose **Kaggle** to engage with the data science community, allowing me to explore real-world datasets and apply my Python skills to solve complex analytical problems.

Future Plans: Over the next four years of my B.Tech CSE Core program, I plan to use these platforms as a living record of my engineering journey. I will utilize **GitHub** to document my semester projects, particularly in cloud computing and data structures, ensuring my technical growth is visible to future recruiters. On **LinkedIn**, I aim to share my certifications, such as my participation in the IIT Bombay Techfest, and document future internship experiences to build a credible brand. Finally, I will use **Kaggle** to participate in global competitions, which will help sharpen my machine-learning expertise before I graduate in 2029.

Task 3: Coding & Collaboration

Platforms Report

Platforms Used: HackerRank, Google Forms, and Google Sheets.

Activity and Practice: In this task, I practiced both technical problem-solving and digital leadership. For the coding component, I used **HackerRank** to solve the "Python If-Else" challenge. This allowed me to practice conditional logic and ensure my code could pass multiple

automated test cases, which is a fundamental skill for any CSE student.

For the collaboration component, I built a "**Digital Literacy Awareness Quiz**" using **Google Forms**. I designed seven targeted questions to educate my peers on topics like Two-Factor Authentication (2FA), phishing defense, and software ethics. I also linked this form to a **Google Sheet** to automate the collection and organization of responses, demonstrating a streamlined workflow for data management.

Academic Benefit: These tools will be vital to my academic success at VIT Bhopal. HackerRank provides a platform to sharpen the algorithmic thinking required for my core programming courses and future technical interviews. Meanwhile, mastering Google Workspace ensures I can lead group projects effectively, collect research data accurately, and present information in a structured, professional manner. Together, these platforms bridge the gap between individual technical ability and effective digital collaboration.

Task 4: Professional Communication

Report

Digital Communication Case Study: A significant real-world example of poor digital communication occurred when a job applicant's informal "text-speak" in an email led to their immediate disqualification. The candidate used "u" instead of "you" and omitted a professional salutation when replying to a hiring manager. This lack of etiquette was interpreted as a lack of respect and poor attention to detail, causing the company to rescind the interview offer.

Lessons Learned: To prevent such a professional setback, the candidate should have applied the **Email Etiquette Checklist** I developed for this task. Specifically, using a formal greeting like "Dear [Name]" and proofreading for professional grammar would have maintained a positive impression. In a college environment like **VIT Bhopal**, similar mistakes when emailing professors—such as forgetting to include a registration number or using a vague subject line—can lead to delayed responses or academic misunderstandings. Establishing these formal habits now ensures that my digital presence remains an asset rather than a liability.

Task 5: Cybercrime Awareness

Report

Research Insights: What surprised me most while researching the "Reverse QR Code" scam was the psychological sophistication used by fraudsters. I previously assumed that cybercrime was purely a technical hack, but I discovered that it often relies on "social engineering"—exploiting a student's excitement for a bargain or a quick scholarship to bypass their common sense. The fact that many victims are tech-savvy CSE students proves that anyone can be vulnerable when rushed or distracted.

Personal Habit Change: As a result of this study, the one habit I will personally change is my "blind trust" in payment requests. I have now disabled the "Auto-Accept" feature on my UPI apps and committed to a "Pause before PIN" rule. I will never enter my PIN without manually verifying the recipient's name and ensuring the transaction is an "Outward" payment. Furthermore, I have shared the 1930 Helpline with my batchmates at VIT Bhopal to ensure we all know the immediate steps to take if a financial breach occurs.

THANKYOU
